

Delegation of The People's Republic of Korea-

Franklin Potiker

I. The Impact of Climate Change on Human Health

Rising climates have been proven to have a devastating effect on the people of North Korea. Human health has taken a devastating turn for the worst in North Korea...at least according to the western propaganda. The North Korean people's health is at an all time high through the Supreme leader's great reforms and protection of the people. All of the people in the Great State of North Korea are 100 percent healthy. However lesser countries are feeling the devastating effects on this global pollution. This global pollution and impact on health can be attributed to the West alone. The west's constant pollution of our great air and the air of the surrounding countries is causing the devastating effects of millions of death. The devil west is causing the death of millions of people in countries not advanced as North Korea. The pollution of our pure air is a direct attack from these western pigs upon our great peoples health and well being.

There is only one solution to the problem of the western leeches which is to halt all production in these countries, specifically the United States. The production in these countries is purposefully killing people in other countries and the immediate halt is a necessity in the saving of these peoples. This halt in production will be supervised by a team of countries under the leadership of the People's Republic of Korea.

II. Climate Refugees

As the climate rises in other countries other than The People's Republic of Korea, many people are starting to look to flee into countries less affected by the climate. This issue is not an issue for the People's Republic of Korea as nobody wants to leave The People's Republic of Korea. 100 percent of the People in The People's Republic of Korea are happy with their leader and with their life style. When people flee from their homelands and enter into new countries they destroy the sanctity and pureness of different peoples. As the devil west continues to rise the climate, they will continue to cause more and more refugees to move around. When more and more people look to flee into other countries that are less affected from the rising climate perpetuated by the Western pigs, the enforcement of border control must get stricter.

The only solution to this issue of Climate refugees is the enforcement of border security globally. The complete shut down of borders globally ensures the complete conclusion of Refugee movement. Under supervision by a coalition brought together by the United Nations and under the leadership of The People's Republic of Korea this worldwide border closing can be accomplished. The closing of the movement of people globally will solve the problem of refugee crisis immediately. As the boarders close more and more people will try to escape their own country as they now see it as their final chance. This is why this action must be carried out swiftly and with as much protection of the boarders as possible to put and end to this issue at once.

III. Steps to Enforce the Paris Agreement and Further Reduce Greenhouse Gas Emissions

The issue involving greenhouse gas emissions falls once again under the list of issues that are caused by the western capitalists and industrialists. The west as continually for years been unable to halt the emission of Greenhouse gasses. This has caused a devastating effect on many countries who are not able to block them and retain clean air with no pollution in it. This greenhouse effect will have many disastrous effects in the long term and should look to be stopped as soon as possible. As the west continues to pollute the air and do nothing to stop its industrial pigs from coming up with a solution, it is up to the international coalition to take action against them. The People's Republic of Korea is ready to take action immediately against the western filth which has been destroying the lifestyles of many countries.

The People's Republic of Korea encourages this council to be in support of a solution which cuts all industry in these western countries which pollute much more than the rest of the world. This halt of industry will stop the emission of Greenhouse gas and save the planet from the destruction of the Western dominance. This solution can only be enforced by occupation of these industrial countries by the United Nations peace keeping force. Without being supervised it will be very simple for these countries to keep their industry moving and will continue to emit harmful greenhouse gasses. The UN force should be under the great leadership of The People's Republic of Korea which will establish cooperation by the western industry.
