

Delegate: COP 22

School: Oakridge Secondary School

Country: Andorra

Committee: United Nations Framework on Climate Change

Topic: Climate Change

A) Climate change in western Europe has affected The country of Andorra and its economy. Andorra is a very small country in Europe that is located in between Spain and France, its major income is tourism. Andorra is gifted with some of the most beautiful scenery in all of western Europe and is home to numerous nature parks and conservation areas. Andorra is one of the best places to ski in the world because of its exhilarating mountains and its perfect skiing weather. Tourism generates 80% of Andorra's GDP and climate change has affected this massively in the past year.

B) The change of climate in Andorra is very major because a 2°C temperature rise, the ski season would be 30% shorter. Every year Andorra attracts 10.2 million tourists and most tourist visit during the winter time. A 15% fall in tourism would cost the country of Andorra \$50 million each season. Many resorts have started to invest in snowmaking machines to insure the right elevations of snow on their mountains.

C) A country like Andorra with its population and its bold political duddy free country should not fall because of industrial corruption in our environment, it should not fall because of our lack of respect to keep our earth clean and environmentally healthy

Sincerely,

Nate Malhis
